GRANTEE INFORMATION

Project Overview

Albuquerque Public Schools is significantly revising a magnet middle school; converting an elementary school from a traditional program to a science, technology, engineering, and mathematics (STEM) magnet; and developing a partial STEM magnet program in a high school to create a K-12 STEM pathway. The Magnet Schools Assistance Program (MSAP)-funded project uses engineering principles to engage students in analytical thinking and creative problem solving to ensure students are college and career ready and prepared to enter New Mexico's growing technology workforce. The MSAP schools engage students in authentic STEM experiences and attract students from different social, economic, ethnic, and racial backgrounds to create diverse learning environments. The MSAP project supports the district's vision that every student graduates fully prepared for citizenship and careers.
